

# FortMesa

Your entire workforce is your cybersecurity workforce.

## Protect against cyber loss

Use proven methods to manage most information security risks.

## Share Security Posture

Make a public commitment to security and share it with others.

**No cyber-warriors required.**

## No Training Requirement

Use your existing team to staff the risk management process.

**Your team, guided, step-by-step.**

## FortMesa is Your Deputy CISO

A security manager for everyone.

- 1) Engage key individuals in key activities to effect change.
- 2) Guide the organization through risk management.
- 3) Triage the problem to break the attack chain.

**Free and low cost plans.**

**FORTMESA.COM**

## HOW IT WORKS

Our method combines the latest in security best practice with behavioral economics to provide a low-cost route to security.

Name your security process: \_\_\_\_\_, fortmesa.com.

### Company Name

#### Security Charter

##### Mission

The process of information security plays a critically important role in effectively managing overall organizational risk. In recognition of this fact and in an effort to protect the assets of this organization as well as its many stakeholders the following resolution shall enact a formalized information security program. This information security program's remit shall be to effectively manage organizational information risk to the maximum amount possible by focusing on the availability, confidentiality, integrity and safety of information systems.

##### Scope

This charter's remit shall include all organizational business and operations and its scope is unlimited.

- 1 **Enroll then commit to fostering a culture of security and recruit your coworkers to do the same.**

### Control Framework

Secure Configurations for Network Devices

CIS CSC 11.4  
Manage network devices using two-factor authentication and encrypted sessions.

## WHAT'S THE COST?

No commitment security management for free or with low-cost paid plans as low as \$100/mo.

# Has your organization formed a complete security architecture?

## About FortMesa

FortMesa delivers a machine-based intelligence which augments your organization's existing workforce with a knowledge-based expert system built to manage security.

We quickly understand your organization's risk then break down security actions into small discrete tasks. This allows your team to maintain vigilance and make continuous improvements to information security posturing.

### Threat Modeling

Inform defenses by collaboratively mapping threats faced specifically by your organization.

### Vulnerability Management

Detect vulnerabilities with agent-based scanners and manage remediation activities as a team.

### Asset Management

Maintain a living asset list to inform defense and coordinate security actions with stakeholders.

### Governance, Risk & Compliance

Satisfy regulatory compliance with automatically generated up-to-date security documentation.

### Control Framework

Deploy a comprehensive control framework to manage cyber-risk and map to other common standards.

### Trusted Partners

Access pre-vetted technologies, products and services from our platform partners to further secure your systems.

We have built a product designed to guide our customers in managing most information security risks with the least amount of cost. Commit to continuous improvement in information security using FortMesa or learn more about the FortMesa Trustmark program at <https://fortmesa.com/>.
